Product Name	OPRK1 Polyclonal Antibody	
Host Species	Rabbit	
Clonality	Polyclonal	
Isotype	IgG	
Purification	Affinity purification	
Applications	WB	
Species Reactivity	Human,Mouse,Rat	
Immunogen Description	Recombinant fusion protein of human OPRK1 (NP_000903.2).	
Other Names	OPRK1; K-OR-1; KOR; KOR-1; OPRK; opioid receptor kappa 1	
Accession No.	Swiss-Prot#:P41145NCBI Gene ID:4986	
Uniprot	P41145	
GeneID	4986;	
Calculated MW	43kDa	
Formulation	Avoid freeze / thaw cycles. Buffer: PBS with 50% glycerol, pH7.4.	
Storage	Store at -20°C	

Application Details

WB 1:500 - 1:2000

Images

Western blot analysis of extracts of various cell lines, using OPRK1 at 1:1000 dilution.

Background

This gene encodes an opioid receptor, which is a member of the 7 transmembrane-spanning G protein-coupled receptor family. It functions as a receptor for endogenous ligands, as well as a receptor for various synthetic opioids. Ligand binding results in inhibition of adenylate cyclase activity and neurotransmitter release. This opioid receptor plays a role in the perception of pain and mediating the hypolocomotor, analgesic and aversive actions of synthetic opioids. Variations in this gene have also been associated with alcohol dependence and opiate addiction. Alternatively spliced

transcript variants encoding different isoforms have been found for this gene. A recent study provided evidence for translational readthrough in this gene and expression of an additional C-terminally extended isoform via the use of an alternative in-frame translation termination codon.
