Background

Transcriptional regulator that binds the cAMP response element (CRE), a sequence present in many viral and cellular promoters. Isoforms are either transcriptional activators or repressors. Plays a role in spermatogenesis and is involved in spermatid maturation By similarity. Masquilier D., Cell Growth Differ. 4:931-937(1993). Meyer T.E., Nucleic Acids Res. 20:6106-6106(1992).
